# The **TWISTED JUNIPER**

## of China

# *Juniperus Chinensis Torulosa*

. . . The Twisted Juniper of China

ITS ORIGIN cloaked in true oriental mystery, its introduction covered in a Babel of names, China's Twisted Juniper stands alone as one of the most noteworthy of the coniferous flora of California.

Few plants in all the world can match the rugged individuality of this strange Juniper. Unconventional in the extreme, this handsome plant follows such an unpredictable course in growth that it would seem to be especially directed by the gods of its oriental ancestry to war on staid formality. Indeed, its bizarre and tortuous beauty intrigued amateur botanists so greatly that they led this exotic conifer into an onomastic jungle where it was nearly lost.

Thanks to the untiring efforts of Kate O. Sessions of San Diego and Alice Eastwood of the Academy of Sciences in San Francisco, respectively Deans of Horticulture and Botany of the Pacific Coast, this splendid conifer at last has found its taxonomic position in the pasigraphical language of botany.

Especially valuable to this state because of its ability to thrive in extremes of soils and temperature, Miss Sessions has termed it, "—the finest of all Junipers for California conditions."

Of comparatively slow growth, its use in landscaping is limited only by the imagination. From planting as a single specimen to massing in a background, its perpetually verdant foliage enables it to preempt the highest of admiration in any garden. In addition it is a long lived and excellent tub plant for porch or patio. Planted as a specimen it probably will reach thirty or forty feet in height.

Truly a remarkable plant that will account well for itself in any position in any garden—

JUNIPERUS CHINENSIS TORULOSA  
China's Twisted Juniper.

## PLANT CONIFERS

For an evergreen, permanent, carefree garden

"THE INTEREST in evergreens, particularly in the more durable conifers, is a subject particularly suited to the substantial amateur. The slowness and regularity of growth, the abiding quality in the round of the twelve months, the element of stability in these plants, appeal strongly to the person who has arrived at a settled purpose in life, who has an estate to develop, and whose sentiments are established. We easily reflect our human qualities into them. There is no haste in their nature, no radical change of purpose in their character. They have a strong juvenile habit and quality, and then they age gradually into a picturesque maturity, each one with outstanding individuality. They are not unduly elated over the advent of spring; they are patient in the adversity of midsummer; they withstand the buffet of winter. They cover the margins of the landscapes and enclose the property securely, giving it a serene atmosphere. They typify the strength of strong men and women as they grow old with the advancing years.

"The love of the conifers is no passing fancy. It is not subject to change in fashions. What a man plants today of the large, durable species will give him joy as long as he lives, and the trees will carry his memory to his children's children; 'he shall grow like a cedar in Lebanon.' Urge to plant durable trees is man's desire for immortality, to establish something that will last far beyond his time."

"THE CULTIVATED CONIFERS"

Published by MacMillan Co.

DEL AMO Nurseries were established in 1921 to grow ornamental nursery stock for the wholesale trade. The business has been extended every year until now the nursery is among the largest in the West and maintains one of the largest stocks of ornamental plants and trees in existence. Home owners and garden lovers who visit the nurseries for the first time are amazed at the size and variety of this stock, and especially our huge stock of large specimen shrubs and trees.

Due to the ideal climatic and soil conditions, most of the stock is field-grown and in a wide range of sizes. Because of the high quality of this material, landscape architects have utilized trees and shrubs from Del Amo Nurseries in landscaping many of the largest and most beautiful estates in Southern California.

The nurseries are open to the general public and a cordial invitation is extended to visit them any week day.

Del Amo Nurseries are within easy access of metropolitan Los Angeles, about three miles south of Compton, California, at Alameda and Del Amo Streets.
